Soviet Car Typology
By Mesaravan Istabal

I. Typology for Factories and Industrial Belts

First, step into a cathedral, then organise a line of a surface, then close-up on the model of a box and then compile.

Typologies are –

Box model, functional box and even car box.

II. Engineering steps in

We like the equation – a(b) ---- b (a)

The small box is part of a large box, which contains within it a box.

III. Then compile the art of cars.

Keep reflecting on the assembly line steps now it is configured.

A man and many workers are in steps collecting the parts which come from a blacksmith and then organise the body of the car.

Reflect on the assembly line – first he will make a cinematic window and then a cinematic Godard body, and then organise the engine from the blacksmith in a take they know.
